Client Onboarding & AD Processing Automation

A streamlined solution to eliminate 361 hours of manual work annually

PROPOSAL FOR MIKE JEFFERSON and J&G AVIATION

Veteran Vectors

EXECUTIVE SUMMARY

The Financial Case

361

Hours Saved

Annual time reclaimed from manual processes

$27K

Annual Value

Labor cost savings at $75/hour

208%

First Year ROI

Return on investment within 12 months

4

Month Payback

Break-even point for initial investment

Investment Breakdown

- One-time setup: $4,000
- Monthly retainer: $400
- First year total: $8,800

Long-Term Returns

Year 1: $18,275 net gain
Year 2+: $22,275 annual gain

Ongoing ROI climbs to **464%**

CURRENT STATE ANALYSIS

Customer Onboarding: The Manual Marathon

01

Initial Contact

Receive customer information via email or phone call

02

Quantum MX Entry

Log into system and manually enter all customer data

03

Hubspot and Quickbooks Online Entry

Log into CRM, QB and duplicate the same data entry

04

SOAR Update

Open spreadsheet and manually input information again

05

Folder Creation

Manually create Google Drive folder structure for customer files

06

TBX Entry

Log into system and manually enter customer information

The bottleneck: 70 new customers annually × 30 minutes each = 35 hours of repetitive data entry across multiple systems with constant context switching.

CURRENT STATE ANALYSIS

AD Processing: Almost Automated

1 **Receive Logbooks**
Aircraft logbooks arrive in various formats: PDF scans, photographs, or handwritten entries

2 **AI Extraction**
Gemini AI processes documents and extracts Airworthiness Directive information

3 **Manual TBX Entry**
The 10-hour bottleneck: Manually typing each extracted AD into TBX system, one by one

4 **Compliance Verification**
Review and verify compliance status for each airworthiness directive

5 **System Updates**
Update TBX records to reflect current AD compliance status

Current workload: 35 annual inspections per year × 10 hours each = **350 hours annually**

You're Already Using AI...

Your team has implemented Google Gemini to extract AD information from logbooks; whether they arrive as PDFs, photos, or handwritten documents. This is a smart first step. Let’s take it to the next level.

AUTOMATED FUTURE

Customer Onboarding: Reimagined

One-Time Data Entry

Customer completes intake form, or staff enters information once into a single interface; no more repetitive typing across multiple platforms.

Intelligent Automation

System simultaneously creates Quantum MX templates, TBX templates, HubSpot contacts, QuickBooks entries, SOAR updates, Drive folders, and sends welcome emails.

Confirmation & Control

Receive instant notification. Review and upload CSV templates to Quantum MX and TBX with just two clicks—you maintain final approval.

Dramatic Time Reduction

From **30 minutes** per customer down to just **2 minutes**

93% time savings that frees your team to focus on high-value customer service activities.

Hours Annually

Down from 35 hours

AUTOMATED FUTURE

AD Processing: The Missing Link

We'll connect your existing Gemini extraction to TBX and Quantum MX; eliminating the manual typing bottleneck entirely.

1. **Upload Logbooks**
   Drop PDF files into designated intake folder
2. **AI Extraction**
   Your existing Gemini prompt processes and extracts AD data
3. **Auto-Formatting**
   System creates TBX and Quantum MX compatible CSV templates
4. **Review Checkpoint**
   You verify accuracy in 30 minutes instead of 9 hours
5. **Quick Upload**
   Upload ready-made CSV files with 2 clicks per system

Time Investment Per Annual

- AI extraction: Automated (existing)
- CSV formatting: Automated (new)
- Accuracy review: 30 minutes
- System upload: 1 minute

The Transformation

- 10 hours → **31 minutes** per annual inspection
- 35 annuals × 9.5 hours saved = **332 hours reclaimed annually**
- **Value:** $24,900 per year

What Stays Manual & Why

System Limitations

TBX and Quantum MX don't provide bulk import APIs—they require CSV file uploads through their interfaces. This is a platform constraint, not a choice.

Your Quality Control

You'll review AI-extracted AD data for accuracy (30 minutes per annual) and approve CSV uploads with two clicks. You maintain oversight where it matters most.

What Gets Automated

All data extraction, CSV formatting for both systems, QuickBooks Online API updates, HubSpot contact creation, SOAR spreadsheet updates, Drive folder generation, and email workflows.

Your Retained Controls

1. Upload CSV to TBX (1 click)
2. Upload CSV to Quantum MX (1 click)
3. Review AD accuracy checkpoint

The value proposition: We eliminate 361 hours of typing and formatting work. You keep the final upload control and quality verification that protects your compliance standards.

PROJECT TIMELINE

Implementation: 5-Week Roadmap

Weeks 1-2: Customer Onboarding

- Design and build intuitive intake form interface
- Configure CSV templates for TBX and Quantum MX specifications
- Set up QuickBooks Online API integration with error handling
- Configure HubSpot API, SOAR spreadsheet, and Drive integrations
- Comprehensive testing with real customer scenarios

Weeks 3-4: AD Processing

- Integrate your existing Gemini extraction workflows
- Build intelligent CSV formatters for TBX and Quantum MX compliance
- Create user-friendly review interface for accuracy verification
- Test automation with sample logbooks and edge cases

Week 5: Training & Handoff

- Hands-on training sessions for your team
- Complete documentation package delivery
- Final quality assurance and performance verification
- Go-live support and monitoring

Each phase includes dedicated testing and your feedback incorporation—ensuring the system works exactly how your team needs it to.
